## Overview of Project Implementation Process

South Australia's public works authorities have been designing, building and maintaining public infrastructure and buildings since the nineteenth century. Throughout this history, construction procurement has been an independent endeavour overseen by Infrastructure Ministers and their specialist agencies.

Since 1995, government construction procurement has been managed under a policy umbrella approved by the Government of South Australia. When the *State Procurement Act 2004* was introduced it was determined that 'prescribed construction projects' with a total value exceeding \$150,000 would be exempt from the Act by regulation. This recognised that construction had well-established procurement methodologies with the level of expertise and established processes required in specialised government agencies.

Construction is managed by the policy framework provided by this Construction Procurement Policy: Project Implementation Process, the 5-Step Infrastructure Planning and Delivery Framework and Treasurer's Instructions.

The Project Implementation Process is a generic policy that applies to all types of prescribed construction projects. It has been developed specifically to guide the procurement of construction of infrastructure and buildings and provides detailed procedures which guide Lead Agencies through the process of achieving well designed, appropriately tendered and effectively constructed projects.

It stipulates a role for the Infrastructure Agency, DPTI, in the delivery of prescribed construction projects. The Infrastructure Agency has developed specific implementation guidelines for the application of the Project Implementation Process to construction projects.

The Project Implementation Process integrates with the **5-Step Infrastructure Planning and Delivery Framework** at the completion of Step 4: Project Funding Method and Resource Allocation and provides detailed guidance to Step 5: Delivery of the Project.

During Step 4 the Lead Agency ascertains the need for an infrastructure project to support existing or additional services and:

- defines precisely the service required;
- identifies strategies to meet service delivery needs;

Project Status Report for month ending <month-year>  
 Project name: <project name> Project number: <project code>  
 Client: <client name>

### Project Status Report for Month Ending <month-year>

*(Notes to author - This is expected to be a short document, regardless of project size. In fact, the report may not be any longer than the template. The primary purpose of this report is to communicate to the readers of the project on track and to indicate where it is not on track and what is being done about this. It is NOT to provide a record of what work the team did and what work the team will do - the focus is on decisions from open, not setting what what is going to plan. This makes for a shorter and more focused report. If there is a need to record more detail, then it can be done via an Appendix or attached documents.)*

Project name: <project name> Client: <client name>  
 Project manager: <project manager's name> Project number: <client name>  
 Contract type: <SA, fixed price, internal, other (specify if other)>  
 Report date: <date status report produced, dd-mm-yy>  
 Distribution: <name 1, title> <name 2, title>  
 <client name> <name 1, title> <name 2, title>

**Management Summary**  
 Enter a very brief summary of whether or not the project is on target to meet its key delivery dates, and is on target to meet its budget objectives. If not, what is the key reason (s). You might also indicate in here any significant risks that are in danger of occurring or have occurred, and what you need from your management and the client in the short term to make the project successful. This section should be no more than half to one page, regardless of project size. It should be just one sentence if everything is going according to plan.

**Key Milestones Table (those that represent significant project progress)**

ID	Title	Plan completion date	Forecast completion date	Forecast completion date	Forecast completion date	Current forecast completion date	Actual completion date
		month/yy	month/yy	month/yy	month/yy	month/yy	month/yy
1	Description	dd-mm-yy	dd-mm-yy	dd-mm-yy	dd-mm-yy	dd-mm-yy	dd-mm-yy
2	Description						
...							
N	Description						

**Progress and Deviations from Plan**  
 Provide a brief report of any parts of the project that are NOT progressing as planned, and what is being done to address this. Achievement of key milestones or other significant measure of progress towards the key milestones may be noted. This section is NOT to just be a commentary on what you and your team have done last month. If there is a need to record this for audit purposes or to demonstrate the activities to the client, then put this in an appendix to this report.

**Risk Register**  
 This may be attached to the report if it is tracked in a separate risk database. Make sure that this section, or the attachment, just contains the key project risks. If the risks are documented here, use the following format.

## Final Report on Project Management Skills

### 1. Executive Summary

This report represents the culmination of the work of the Project Management Skills Task Force (PMSTF) and is primarily composed of a set of recommendations.

The PMSTF recommends the creation of a new Project Management Common Interest Group (PMCI), reporting to SOPAG, with responsibilities tied to a number of the other recommendations.

The other key recommendations are:

- Establish an annual inventory that identifies people in the UCLibraries with project management skills. Access to the names should be restricted and made available to SOPAG, as needed.
- Use the skill inventory to select project managers for systemwide projects when appropriate. Determine appropriateness based on a known set of criteria. A recommended set of criteria is provided.
- Focus and fund skill building resources on the skills and techniques that are most critical and weakest (based on the survey, initially, and revised annually.)
- Pursue a blended approach to project management training, including solutions such as mentoring, peer-to-peer, and on-site, and web-based training.
- Assign to the PMCI the tasks of creating a project management glossary and central repository for project management resources, creating and maintaining standard templates for use in systemwide projects, and creating and promoting a project management community of interest.
- Make several changes to the way that systemwide projects are charged by SOPAG and the ACGs:
  - Include an explicit problem statement and success criteria.
  - Specify the scope and resources, but allow the timeframe or scope to be negotiated with the constituted team within a month of the first team meeting.
  - Require that the project manager (and team) conduct a risk assessment as one of the first tasks and come back to the charging entity with results for adjustments to resources or other elements of the charge.
  - Require that project manager utilize the PMCI project definition template as an analysis tool.
  - When a project manager is assigned to a systemwide project, require a role discussion between the project manager and the team manager and as one of the first tasks for the two leaders.

The Appendices of this report provide a list of the key Project Management Skills and Techniques (Appendix A), a draft charge for the Project Management Common Interest Group (Appendix B), and the results of the survey of UCLibrary staff members conducted in January 2010 (Appendix C).

### Sample project execution plan construction.

What is an execution plan of projects? An Execution of Projects is a document used to govern and control a specific project in its execution and for monitoring. The document serves as a communication instrument so that all those involved in the project are aware of the objectives of the project and have knowledge of how they can be achieved. In this article we have included templates of the project execution plan that you can download and use as a reference. We will also cover related issues, such as its uses, the elements of an execution plan of projects and some advantages of using the template. Execution plan for architectural projects File format: 1 MBDownload Execution Execution Plan for civil works important details Details File Format: 2 MBDownload Execution Execution of the Plantilladetaildetailstage Project O: 91 Kbdownload Conceso for the execution of the Geo Sciencedotallies project File format: 1 MBDownload Uses of an Execution Plan for Projects a way of learning about something is to discover its uses. Project execution plans have several uses and are the following: An project execution plan is used as a main document that provides the means to execute, supervise and control a given project. Clear communication is essential in projects, especially during the execution of tasks and activities. That said, an execution plan of projects plays as an important communication tool that ensures that all those who are also working on the project are well informed and duly educated on the objectives of the project. The plan also provides details about how the objectives and goals of the project will be achieved.
