Take equation $5a - 15 + 9a = 3a + 29$ You want to solve for a , so you want to simplify the equation to find the value of a . First, subtract $5a$ from $5a$ and from $3a$ to cancel out the $5a$. Now, your equation should look like: $-15 + 9a = -2a + 29$ Second, you are going to add 15 to -15 and to 29 . Your equation should now look like: $9a = -2a + 44$ Third, you are going to add $2a$ to $-2a$ and $9a = 3a + 29$ Equation: $11a = 44$ Last, divide by 11 on both sides Answer is $a = 4$ (This is because you need to simplify the equation throughout to get the variable a alone with its corresponding value) You can help us out by revising, improving and updating this answer. Update this answer After you claim an answer you'll have 24 hours to send in a draft. An editor will review the submission and either publish your submission or provide feedback. Next Answer Entry-Level Assessment - Page xxxix: 2 Click your Geometry textbook below for homework help. Our answers explain actual Geometry textbook homework problems. Each answer shows how to solve a textbook problem, one step at a time. Glencoe/McGraw-Hill Cummins, et al. Free , Availability Glencoe/McGraw-Hill Cummins, et al.
